

## GemaPark System Architecture

**GemaPark is a web based system utilising Microsoft.NET and Microsoft SQL Server. Teamed with Netguides superior business hosting it provides an extremely secure and reliable business system solution.**

## Netguides superior business hosting

**Netguides provide GemaPark as a fully hosted service solution** on their own dedicated servers. These are housed in specialist London data centres and backed up by award-winning 24/7 support.

Benefits of this system design and implementation are:

- No local software or servers required in your office and no annual supplier update visits
- System accessible from anywhere so your business is visible from wherever you are
- Role-based access so different staff access only their own functions
- Direct integration with public website for 24/7 bookings straight into your business system
- Data export to other systems e.g. Accounts, saves data entry tasks
- Secure data storage and backups managed for you, no local security issues
- 24/7 Support
